Objective

- Seeking a position in the area of web development which provides an environment flexible enough to allow the pursuit of expanding skills, learning new technologies, and career advancement

Training

- Currently pursuing Web Developer Certificate course in Carleton University

Education

- Bachelor Degree in Commerce

Web Technology

Github, Gitbash, JQuery, Javascript, Node.js, HTML, Bootstrap CSS framework, Skeleton CSS Frame work, OpenWeather API, Spoonacular API and Linux.

Project

MealPrep Buddy

MealPrep Buddy is a responsive application, which will suggest meal plans to the users based on five-day weather forecast. Based on the City, application will plan out week of meals, recipes and shopping list. It will recommend exciting meal that match out the day.

Application use the external API to get the live weather data from OpenWeatherMap, it also uses another external spoonacular API to get recipe and ingredients.

Tasks performed:

- Analyzed the requirements and external API in the Spoonacular external API tool kit
- Development of recommending the meal based on weather using HTML, skeleton CSS framework and external spoonacular API.

- Unit testing of the meal recommendation workflow
- Integration testing with OpenWeatherAPI workflow
- Updated the project tasks in the JIRA
- Prepared Readme document and deployed the app in the Git Repository

Environment: JQuery, Javascript, HTML, Skeleton CSS framework, OpenWeather API, Spoonacular API, Github, Gitbash and Linux
